

AutoFOCUS3 telepítése Eclipse Mars 2-re

Az alábbi tutorialt próbáltam átdolgozni:

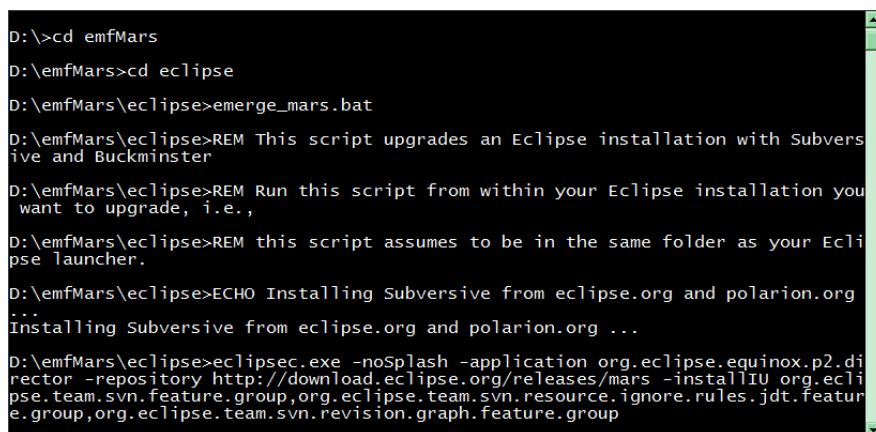

https://af3-developer.fortiss.org/projects/autofocus3/wiki/Developer_Installation

Letöltöttem a legújabb eclipse Modelling toolsot. Az eclipse keplerrel előzőleg letöltött projektből előbányásztam a marshoz való telepítő szkriptet.

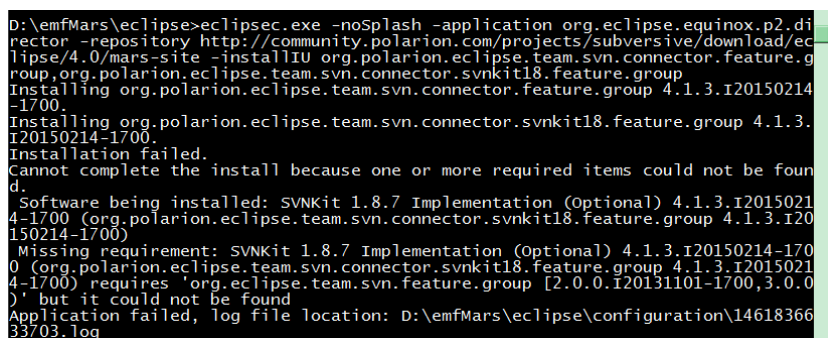

Név	Kit.	Méret	Dátum	At
<DIR>			2016.04.26 17:44	-
emerge	bat	2 144	2016.04.26 17:44	-a
emerge	sh	2 147	2016.04.26 17:44	-a
emerge_indigo	bat	1 450	2016.04.26 17:44	-a
emerge_indigo	sh	1 442	2016.04.26 17:44	-a
emerge_kepler	bat	2 218	2016.04.26 17:44	-a
emerge_kepler	sh	2 203	2016.04.26 17:44	-a
emerge_luna	bat	1 889	2016.04.26 17:44	-a
emerge_luna	sh	1 880	2016.04.26 17:44	-a
emerge_mars	bat	1 889	2016.04.26 17:44	-a
emerge_mars	sh	1 885	2016.04.26 17:44	-a

A szkriptet elhelyeztem az eclipse mappájába majd futattam.

```
D:\>cd emfMars
D:\emfMars>cd eclipse
D:\emfMars\eclipse>emerge_mars.bat
D:\emfMars\eclipse>REM This script upgrades an Eclipse installation with Subversive and Buckminster
D:\emfMars\eclipse>REM Run this script from within your Eclipse installation you want to upgrade, i.e.,
D:\emfMars\eclipse>REM this script assumes to be in the same folder as your Eclipse launcher.
D:\emfMars\eclipse>ECHO Installing Subversive from eclipse.org and polarion.org
...
Installing Subversive from eclipse.org and polarion.org ...
D:\emfMars\eclipse>eclipse.exe -noSplash -application org.eclipse.equinox.p2.director -repository http://download.eclipse.org/releases/mars -installIU org.eclipse.team.svn.feature.group,org.eclipse.team.svn.resource.ignore.rules.jdt.feature.group,org.eclipse.team.svn.revision.graph.feature.group
```

Akadtak problémák a szkript futása közben, mert hiányzott az SVNKit 1.8.7 az eclipse-ből.

```
D:\emfMars\eclipse>eclipse.exe -noSplash -application org.eclipse.equinox.p2.director -repository http://community.polarion.com/projects/subversive/download/eclipse/4.0/mars-site -installIU org.polarion.eclipse.team.svn.connector.feature.group,org.polarion.eclipse.team.svn.connector.svnkit18.feature.group
Installing org.polarion.eclipse.team.svn.connector.svnkit18.feature.group 4.1.3.I20150214-1700.
Installing org.polarion.eclipse.team.svn.connector.svnkit18.feature.group 4.1.3.I20150214-1700.
Installation failed.
Cannot complete the install because one or more required items could not be found.
Software being installed: SVNKit 1.8.7 Implementation (Optional) 4.1.3.I20150214-1700 (org.polarion.eclipse.team.svn.connector.svnkit18.feature.group 4.1.3.I20150214-1700)
Missing requirement: SVNKit 1.8.7 Implementation (Optional) 4.1.3.I20150214-1700 (org.polarion.eclipse.team.svn.connector.svnkit18.feature.group 4.1.3.I20150214-1700) requires 'org.eclipse.team.svn.feature.group [2.0.0.I20131101-1700,3.0.0.I20150214-1700]' but it could not be found
Application failed, log file location: D:\emfMars\eclipse\configuration\1461836633703.log
```

Fogtam magam és megpróbáltam telepíteni az Eclipse Marketplace-ből.

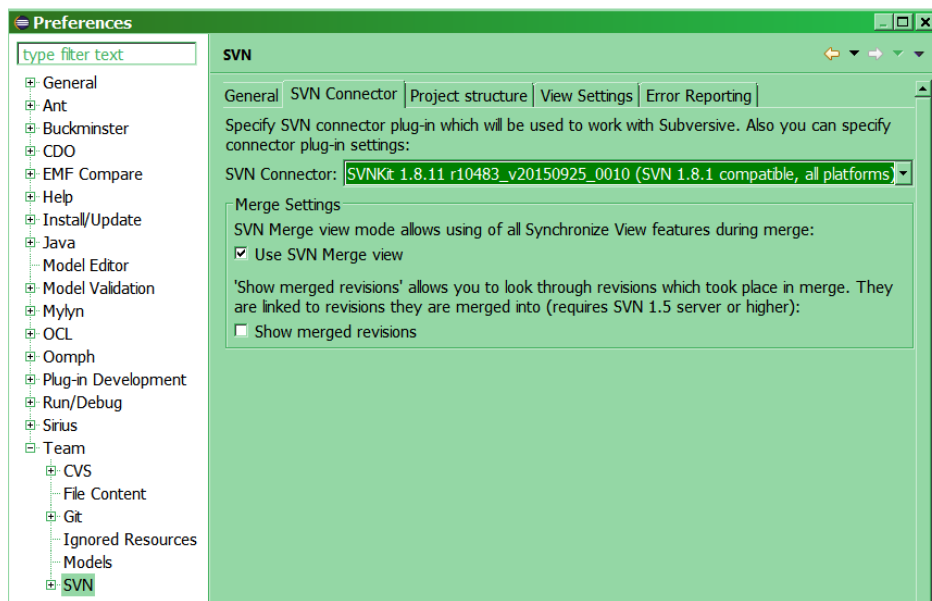

Nem sikerült még csak megtalálni sem. Ezután próbáltam tovább követni az utasításokat.

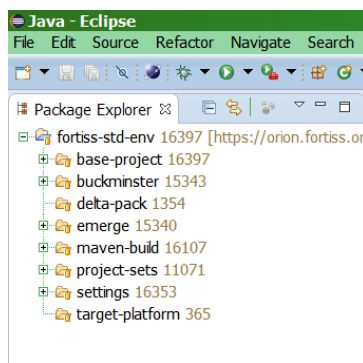

Initial Workspace Content Check-out

1. **Start** Eclipse
2. **Close** the "Welcome" page if it displays
3. Go to **Window -> Preferences -> Team -> SVN** (you might get an error about JavaHL: just click ok) or **Eclipse -> Preferences -> Team -> SVN** under Mac OS X.
4. At the bottom of the preference page, there is an option called **SVN interface**: select **SVN Kit**.
5. Go to **File->Import->SVN->Checkout project from SVN**, then create a new repository location with URL <https://orion.fortiss.org/svn/af3/fortiss-std-env> (login: proxy_svn, password: dW09WmzRcCUF), finally select the root **fortiss-std-env** and click **Finish**.
6. Copy the **fortiss-std-env/settings/config** file to your Subversion configuration (~/.subversion on Unix-like systems and %APPDATA%/Subversion/config on Windows). You may have to merge our recommendation with your setup, since there is only one global config file.
The important section in our configuration is the *auto-props* section, which sets subversion properties upon adding files to the repository.
7. Go to **Window -> Preferences -> ConQAT -> Conqat Rating Support**, under **Excluded files (ANT pattern)** hit **New...** and enter **external-src/****

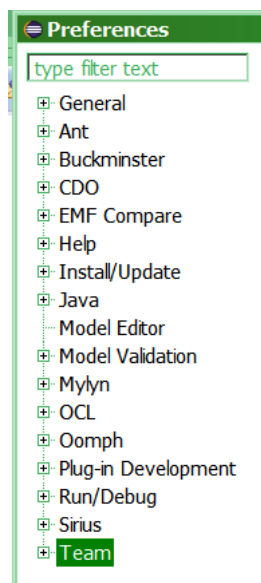

A 4. pontnál már éreztem, hogy valami nem stimmel, mivel nem volt olyan opció, ezért megpróbáltam SVN Connector fülön. Itt azt láttam, hogy az SVN Kit be van állítva, de nem 1.8.7-es, hanem 1.8.11-es.

Semmi baj, menjünk tovább, töltsük le az af3 projektet SVN-ből. Ez sikeresen meg is történt:

A 7. pontot egyáltalán nem sikerült végrehajtani, mert ConQat-nak még a nyomát sem láttam

Úgyhogy ugrottam a következőre

Materializing The Target Platform And Plugin Sources, Building the Code

1. In Eclipse, open the **fortiss-std-env/buckminster** folder.
2. Double-click **buckminster.target**. Hit the **Set as Target Platform** hyperlink in the upper-right corner of the editor.
3. Double-click **af3-phoenix-kepler.cquery**.
4. Click the **Resolve to Wizard** button: this might take a while.
5. After a little while, a dialog will open: click **Finish** (takes a while).

Az első két pont sikeresen végrehajtva, a 3.-nál az **af3-phoenix-mars.cquery-vel** dolgoztam tovább. Eredménye a következő hibajelentés lett:

```
ERROR [0003] : No suitable provider for component

```

Természetesen nem jelent meg a sok-sok plugin a könyvtárban, így nem tudtam folytatni a dolgot.
